Collaboration Policy: You are encouraged to collaborate with up to 3 other students, but all work submitted must be your own independently written solution. List the computing ids of all of your collaborators in the collabs command at the top of the tex file. Do not share written notes, documents (including Google docs, Overleaf docs, discussion notes, PDFs), or code. Do not seek published or online solutions for any assignments. If you use any published or online resources (which may not include solutions) when completing this assignment, be sure to cite them. Do not submit a solution that you are unable to explain orally to a member of the course staff. Any solutions that share similar text/code will be considered in breach of this policy. Please refer to the syllabus for a complete description of the collaboration policy.

## problem 1 Proofs

Learn how to typeset math and construct proofs by reproducing the second proof below. You will need to use the eqnarray or align environment, as well as the eqnarray* or align* environment. Note the reference in red, which should refer correctly to the equation (look up the ref command). The first proof is provided as an example. You MAY NOT setup the formulas in an image and link the image into the document.

Definition 1 A rational number is a fraction $\frac{a}{b}$ where $a$ and $b$ are integers.
Theorem $1 \sqrt{2}$ is irrational.
Proof. By Contradiction. For a rational number $\frac{a}{b}$, without loss of generality we may suppose that $a$ and $b$ are integers which share no common factors, as otherwise we could remove any common factors (i.e. suppose $\frac{a}{b}$ is in simplest terms). To say $\sqrt{2}$ is irrational is equivalent to stating that 2 cannot be expressed in the form $\left(\frac{a}{b}\right)^{2}$. Equivalently, this says that there are no integer values for $a$ and $b$ satisfying

$$
\begin{equation*}
a^{2}=2 b^{2} \tag{1}
\end{equation*}
$$

Assume toward reaching a contradiction that Equation 1 holds for $a$ and $b$ being integers without any common factor between them. It must be that $a^{2}$ is even, since $2 b^{2}$ is divisible by 2 , therefore $a$ is even. If $a$ is even, then for some integer $c$

$$
\begin{aligned}
a & =2 c \\
a^{2} & =(2 c)^{2} \\
2 b^{2} & =4 c^{2} \\
b^{2} & =2 c^{2}
\end{aligned}
$$

therefore, $b$ is even. This implies that $a$ and $b$ are both even, and thus share a common factor of 2 . This contradicts our hypothesis, therefore our hypothesis is false.

Theorem 2 If $n \in \mathbb{Z}$ is a non-prime integer with $n>1$, then $2^{n}-1$ is not prime [3].
Proof. Direct Proof. Since $n$ is not prime, $\exists a, b \in \mathbb{Z}$ such that $a<n$ and $b<n$ and $n=a b$. Let

$$
x=2^{b}-1
$$

and

$$
y=1+2^{b}+2^{2 b}+\ldots+2^{(a-1) b} .
$$

Then,

$$
\begin{align*}
x y & =\left(2^{b}-1\right)\left(1+2^{b}+\ldots+2^{(a-1) b}\right)  \tag{2}\\
& =2^{b}\left(1+2^{b}+\ldots+2^{(a-1) b}\right)-\left(1+2^{b}+\ldots+2^{(a-1) b}\right)  \tag{3}\\
& =2^{a b}-1  \tag{4}\\
& =2^{n}-1 . \tag{5}
\end{align*}
$$

Since $b<n$, then $x=2^{b}-1<2^{n}-1$. Likewise, since $a b=n>a$, we know that $b>1$ and $x=2^{b}-1>2-1=1$. Therefore, $y<x y=2^{n}-1$ and $2^{n}-1$ can be written as the multiplication of $x$ and $y$ by Equation 5 . Therefore $2^{n}-1$ is not prime.
problem 2 Sums and Equations
Recreate the following equation to practice layering parentheses and brackets. Hint: consider adding left or right to your equation.

$$
T(n)=\left[T\left(\frac{n}{2^{i}}\right)+\sum_{k=0}^{i-1}\left(\log _{2} \frac{n}{2^{k}}\right)\right]+1
$$

problem 3 Passages
Include a passage from your favorite book, including a citation. You will need to update the bibliography. bib file and include it in your submission. Note that your references will be numbered in alphabetical order. Hint: consider using the quote environment.
"Forty-two!" yelled Loonquawl. "Is that all you've got to show for seven and a half million years' work?"
"I checked it very thoroughly," said the computer, "and that quite definitely is the answer. I think the problem, to be quite honest with you, is that you've never actually known what the question is." [ 1 ]

## Gradescope Submission

Submit your files to the Gradescope assignment "Unit A - Basic 1 - LaTeX". You should only submit the following file types:

- .tex - The text file containing your $\mathrm{ET}_{\mathrm{E}} \mathrm{X}$ markup,
- .pdf - The PDF generated by running LATEX on your .tex file, and
- . bib - The Bibliography file containing BibTex entries of any sources used.

Note: If you use Overleaf, you will need to download the PDF and source files separately, then upload the files to Gradescope.

## Additional Resources

Along with the examples in this file, here are some other resources to LATEXdocumentation:

- Overleaf Tutorials - Tutorials on Overleaf
- Latex Primer - An extensive tutorial
- Symbols - Many symbols that you may wish to include
